

## What is a Talon Flexible Nightguard?

The DentRx Flexible Nightguard is a one piece nightguard made from Talon, a non-toxic, semi-hard thermoplastic that becomes flexible when submerged in warm water for 20 seconds. This flexibility provides ease of insertion and exceptional patient compliance and comfort. Once in the mouth the DentRx Talon Flexible Nightguard hardens like acrylic but with none of the harsh chemicals or hardeners.

“Simply put, DentRx Nightguards are the best. My patients love them, and I wear one too.”

—Dr. Karen Nakagawa

## Why Talon?

Because Talon is the most effective and safest material we've found after 30 years of dental appliance manufacturing. Talon is the perfect material for comfortable and reliable nightguards. Talon remains resilient at body temperature providing comfort to patients, without being too soft. It is BPA free, non-toxic, and there are no harsh chemicals such as hardeners and internalized plasticizers. It will not harden over time or warp under normal care. And even better, its non-toxicity leaves a lighter footprint, making it a greener choice in dental appliances.

## Why DentRx?

DentRx is a family owned and operated dental lab with over 30 years of experience in design and fabrication of dental appliances. We provide quick turnaround (3 days in lab) and pride ourselves on high quality products and personalized customer service. We believe in our products, their effectiveness and overall holistic benefit. And we believe once you try the DentRx Talon Flexible Nightguard, you will not go back to traditional, hard acrylic devices.
